List of Software Used

1. Frontend Development

Software/Tool	Purpose
React.js	Used for developing the Restaurant Web Dashboard and creating interactive web pages.
React Native	Used for building the Student Mobile App for Android devices.
Expo CLI	Simplifies mobile app development, testing, and deployment on virtual and physical devices.
HTML5	For structuring the web dashboard components.
CSS3 / Tailwind CSS	For styling, animations, and responsive layouts.
JavaScript (ES6)	Adds interactivity, logic, and functionality to both web and mobile interfaces.

---

2. Backend Development

Software/Tool	Purpose
Node.js	Executes server-side JavaScript code and handles backend operations.
Express.js	Manages server routing, API endpoints, and middleware for RESTful communication.

---

3. Database

Software/Tool	Purpose
MongoDB	Stores user data, restaurant info, food details, and reward points securely.
MongoDB	Provides cloud-based NoSQL database hosting

Software/Tool	Purpose
Atlas	for easy access and scalability.

---

4. Development Environment

Software/Tool	Purpose
Visual Studio Code (VS Code)	Main code editor used for writing, managing, and debugging project files.
Android Studio	Used to run and test the mobile app on virtual Android devices.

---

5. Authentication & Security

Software/Tool	Purpose
JSON Web Token (JWT)	Provides secure authentication for users and manages session tokens.
bcrypt.js	Encrypts user passwords for better security.
dotenv	Manages environment variables like database URLs and secret keys safely.

---

6. Additional Tools & Libraries

Software/Tool	Purpose
npm (Node Package Manager)	Installs and manages dependencies for backend and frontend modules.
Axios	Handles API communication between frontend and backend servers.
Google Chrome / Firefox	For testing and debugging the Restaurant Dashboard web interface.
Git & GitHub	For version control and collaborative code management.
